

GLASBORD®

fiberglass panel with

Surfaseal®

When you say Glasbord, there's only one. It's a fiberglass reinforced plastic paneling manufactured exclusively by Crane Composites, Inc. and inspired by Kemlite.

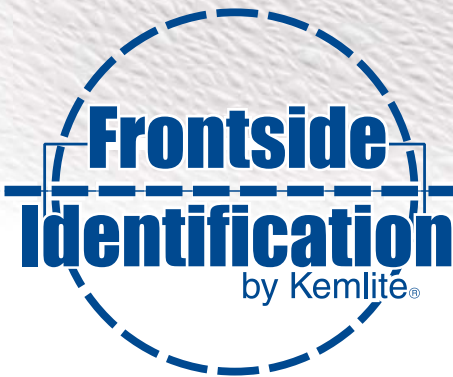

Years of expertise, research, and technical knowledge have gone into making Glasbord paneling the best possible product. Glasbord has become one of the most copied products in the frp market.

Because it is a standard, some believe all embossed plastic wall paneling is Glasbord, but it is not.

Glasbord is a registered trademark and should be used only when referring to our product.

Only Kemlite Glasbord panels can be identified before installation by colored threads on the back. After installation, Glasbord can be identified by a Translucent Plastic Thread with Fluorescent Pigment Design® embedded in the front of the panel and visible by black fluorescent lighting.

Ask about the manufacturer. If Crane Composites made it, you know you have the real thing.
