ArmorTuf with Integral Scuff Added to Transportation Product Line

CHANNAHON, ILLINOIS – September 26, 2006– Crane Composites, Inc. (formerly Kemlite Company, Inc.), a Crane Co. company, announces the addition of ArmorTuf Liner with Integral Scuff to the Transportation product line.

The integral scuff is a heavy duty, built-in protective wearband. With this new, innovative panel, there is no need to use aluminum scuffplate. The one-piece design of the Integral Scuff ArmorTuf panel eliminates the need for mechanical fasteners and the potential for leakage into the foam.

The entire panel contains heavyduty woven roving plus chopped glass from the top to the bottom of the panel.

In addition, the bottom section (12" or 24") contains an additional layer of 60 ounce woven roving glass and can be heavier for the most abusive operations. The net result is a liner panel/ built-in scuffplate with a seamless transition from liner to scuff.

Crane Composites, Inc. is the world's largest manufacturer of fiberglass reinforced plastic (frp) panels and operates four manufacturing facilities in the U.S. and one facility in England with warehouses and sales offices throughout the world. Crane Composites product lines include frpDesign Solutions, Glasbord®, Sequentia Structoglas®, Lascoboard®, Kemlite® Transportation Products, Filon® RV Products, LamproSystems®, frp Metal Building Daylighting Systems and Industrial frp Building Systems.
