

Crane Composites, Inc. Introduces:

ArmorTuf® Lightweight Liner into Truck Body Market in Mexico

Channahon, IL (June 29, 2018) — Crane Composites has launched its newest ArmorTuf® liner into the Truck Body market in Mexico. The ArmorTuf Lightweight Liner combines a durable woven fiberglass and smooth film to create a high-impact liner designed for truck bodies. This liner was engineered to address the market's need for a liner product with the durability and strength characteristics of a woven product and the smooth appearance of our ArmorTuf High Impact Liner, all at a competitive price point. In addition, the ArmorTuf Lightweight Liner can double as an interior or exterior sidewall liner by removing or adding our patented Surfaseal® film.

The sidewall liner market in Mexico was quickly trending towards a lightweight, smooth and woven liner. The technical, manufacturing, and sales teams in Joliet, IL worked together to rapidly design, engineer, and produce this extension to our product line allowing us to gain the specification for several upcoming truck body builds.

The ArmorTuf Lightweight liner continues to be trialed by top truck body manufacturers across several fleets for both interior and exterior applications. The Composites team is very proud of this launch into the Mexican Truck Body market and expects continued great results moving forward.
