

SCUFF PLATE designed to last

EGAT | Kemlite® High Strength Scuff Plate

Kemlite® ScuffPlate panels are a high-impact, durable, light-weight product that are more cleanable, more stain resistant, and more abrasion resistant than competitive plastic materials and alternative solutions such as wood and aluminum.

Kemlite scuff plate is designed to take the abuse that is inevitable from loading and unloading your trailers and truck bodies. Scuff is the first barrier, the sacrificial layer; for that reason, we know it needs to last. Kemlite scuff plate will act as that barrier as evidenced by the image to the left

APPLICATION

dry trailers & truck bodies
refrigerated trailers & truck bodies

APPLICATION **Dry / Refrigerated Trailers & Truck Bodies**

super tough scuff

benefits

- Minimizes damage caused by forklifts, pallets, crates and cargo
- Protects against dents and tears
- Equipped with Surfaseal® Technology for unmatched cleanability and stain resistance
- Superior performance at a fraction of the weight and thickness of alternative materials

purpose

Kemlite Scuff Plate is specifically designed and formulated for the use as a scuff plate to protect your sidewalls from forklift and pallet damage in high abuse or impact areas within dry van & refrigerated trailers and truck bodies.

THERE'S NO BETTER OPTION

EGAT | Gator Plate

EGAT | KEMLITE® HIGH STRENGTH LINER & SCUFF PLATE

about

- 0.145" thick, textured embossed panel
- Thinner high impact panel- weight savings without sacrificing strength
