

REEFER ROOF® With Woven Edge Reinforcement

RISC | Kemlite® Reefer Roof

For a roof solution specifically designed and formulated to improve the thermal efficiencies of your trailer or truck body, one product rises above other materials in the market: Kemlite® Reefer Roof. Our Kemlite Reefer Roof is engineered with a unique resin formulation to reflect most heat-generating solar radiation.

Our Kemlite Reefer Roof has the ability to reflect most solar radiation, reducing heat transfer and reefer unit operating cost.

THERE'S NO BETTER OPTION

durable & sustainable composite roof

benefits

ENHANCED REINFORCEMENTS

- Random long strand chopped fiberglass
- Woven reinforcement built into edges to enhance fastener retention

ENGINEERED FOR THE FLEET

- Contains high amounts of specialized pigment which prevents most solar radiation from being transmitted into the interior of a trailer and enhances the weathering properties of the roof.

why Kemlite Reefer Roof?

- Reflects up to 2x the solar radiation when compared to an oxidized aluminum roof
- Thermal break; conducts 1000x less heat than aluminum roof panels
- Improves ability to maintain vehicle's interior temperature
- Durable, impact resistant roof panel
