CRANE Composites

IN THE LEAD; AHEAD OF FSMA
fiberglass reinforced plastic

Crane liners have been designed to allow for full compliance with USDA/FDA requirements for non-food contacting applications for years and support the new Food Safety and Modernization Act.

Our products have been used for over 65 years and are used today in food processing plants, restaurants, and in transportation truck bodies and trailers, because they are a cost effective way to create a clean, durable, and sanitary surface.
